## Singapore Standards

Ensuring safety and improving cost efficiency are key concerns for the building and construction industry in Singapore. Building and Construction Standards, which cover aspects such as structural design and design of concrete structures, are essential in helping companies achieve these goals. Singapore has recently begun the adoption of the Eurocode Standards to help align Singapore's building and construction standards with best practices. A series of National Annexes to the Eurocode Standards on the "Basis of structural design", "Actions on structures" and "Design on concrete structures" have been launched and subsequently, those for other Eurocode Standards will be developed and launched. All these will help raise the quality and productivity of companies in the industry, thereby increasing their competitiveness.
