National Foreword

This Singapore Standard was prepared by Technical Committee on Storage and Transportation of Compressed Gases including LPG under the direction of the Mechanical Standards Committee. It is identical to ISO 7292 : 1997 – ‘Flowmeter regulators used on cylinders for welding, cutting and allied processes - Classification and specifications’.

This specification was prepared with the aim of standardising the way of specifying the performance characteristics of flowmeter regulators.

In Singapore Standards, it is a practice to use a full point on the baseline as the decimal marker whereas in ISO Standards a comma is used throughout as a decimal marker and a space is for the thousand marker. Where the words “ISO 7292 : 1997” appear, they should be interpreted as “SS 446 : 1998”

Where the words “This International Standard” appear, they should be interpreted as “This Singapore Standard”.

NOTE

1. *Singapore Standards are subject to periodic review to keep abreast of technological changes and new technical developments. The revisions of Singapore Standards are announced through the issue of either amendment slips or revised editions.*
2. *Compliance with a Singapore Standard does not exempt users from legal obligations.*
