This Singapore Standard was approved by the Energy Standards Committee on behalf of the Singapore Standards Council on 12 October 2017.

First published, 2018

The Energy Standards Committee, appointed by the Standards Council, consists of the following members:

		Name	Capacity
Chairman	:	Mr Ho Hiang Kwee	Individual Capacity
1 st Dy Chairman	:	Mr Ram Bhaskar	National Environment Agency
2 nd Dy Chairman	:	Mr Wong Kum Hoong	Energy Market Authority
Secretary 1	:	Mr Jason Low	SPRING Singapore
Secretary 2		Ms Barbara Bok	SPRING Singapore
Members	:	Assoc Prof Chai Kah Hin	National University of Singapore
		Mr Adrian Cheong Wah Onn	Land Transport Authority
		Capt Charles Alexandra De Souza	Maritime and Port Authority of Singapore
		Mr Huang Xuebo	Agency for Science, Technology and Research
		Ms Kavita Gandhi	Sustainable Energy Association of Singapore
		Ms Kriti Gupta	SP PowerGrid Ltd
		Mr Richard Kwok	Singapore Business Federation
		Mr Nilesh Jadhav	Nanyang Technological University
		Mr Tan Chek Sim	Housing & Development Board
		Mr Tan Pua Yong	Singapore Manufacturing Federation
		Er. Teo Kong Poon	The Institution of Engineers, Singapore
		Mr Toh Eng Shyan	Building and Construction Authority
		Prof Tseng King Jet	Singapore Green Building Council
		Mr Wong Toon Suan	Gas Association of Singapore
		Prof Wong Yew Wah	ASHRAE Singapore Chapter
		Er. Yeow Mei Leng	Association of Consulting Engineers Singapore
Co-opted Members	:	Mr Norman Lee	Individual Capacity
		Prof Toh Kok Chuan	Individual Capacity

The Working Group, appointed by the Energy Standards Committee to assist in the preparation of this standard, comprises the following experts who contributed in their *individual capacity*:

		Name
Convenor	:	Mr Roland Tan
Members	:	Assoc Prof Ang Hock Eng
		Mr Chng Tuan Meng
		Er. Eddie Chong Chun Sen
		Mr Choong Chow Neng
		Ms Lydia Goh
		Mr Norman Lee
		Mr Andrew Lim
		Ms Tracy Liu
		Mr Colin Ong
		Er. Ong Eng Tong
		Mr S Suresh Kumar
		Mr Toh Eng Shyan
		Dr Tseng King Jet

The organisations in which the experts are involved are:

Association of Consulting Engineers Singapore Building and Construction Authority Chevron Philips Chemicals Asia Pte Ltd G-Energy Global Pte Ltd Ingersoll-Rand South East Asia (Pte) Ltd MSD International GmbH (Singapore Branch) National Environment Agency Nanyang Technological University Singapore Green Building Council Singapore Manufacturing Federation Sustainable Energy Association of Singapore The Institution of Engineers, Singapore

National Foreword

This Singapore Standard was prepared by a Working Group under the direction of the Energy Standards Committee.

This standard is identical with ISO 11011:2013 published by the International Organization for Standardization.

Where appropriate, the words "International Standard" shall be read as "Singapore Standard".

Attention is drawn to the possibility that some of the elements of this Singapore Standard may be the subject of patent rights. Enterprise Singapore shall not be held responsible for identifying any or all of such patent rights.

NOTE

- 1. Singapore Standards (SSs) and Technical References (TRs) are reviewed periodically to keep abreast of technical changes, technological developments and industry practices. The changes are documented through the issue of either amendments or revisions.
- 2. An SS or TR is voluntary in nature except when it is made mandatory by a regulatory authority. It can also be cited in contracts making its application a business necessity. Users are advised to assess and determine whether the SS or TR is suitable for their intended use or purpose. If required, they should refer to the relevant professionals or experts for advice on the use of the document. Enterprise Singapore shall not be liable for any damages whether directly or indirectly suffered by anyone or any organisation as a result of the use of any SS or TR.
- 3. Compliance with a SS or TR does not exempt users from any legal obligations.

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

The procedures used to develop this document and those intended for its further maintenance are described in the ISO/IEC Directives, Part 1. In particular the different approval criteria needed for the different types of ISO documents should be noted. This document was drafted in accordance with the editorial rules of the ISO/IEC Directives, Part 2. <u>www.iso.org/directives</u>

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights. Details of any patent rights identified during the development of the document will be in the Introduction and/or on the ISO list of patent declarations received. <u>www.iso.org/patents</u>

Any trade name used in this document is information given for the convenience of users and does not constitute an endorsement.

The committee responsible for this document is ISO/TC 118, *Compressors and pneumatic tools, machines and equipment*, Subcommittee SC 6, *Air compressors and compressed air systems*.

Introduction

This International Standard has been developed with reference to available documentation¹ (see Bibliography) relating to energy assessment of compressed air systems.

This International Standard is produced to support the objectives of energy management for those organisations utilizing compressed air and wishing to improve the energy efficiency of such systems. Remembering the words of Lord Kelvin who said in 1883, "If you cannot measure it, you cannot improve it", this International Standard aims to assist with measurement and provide the knowledge to enable improvement.

The prime consideration for any compressed air system is the ability to generate air with the least amount of energy. Having done this, the next consideration is to transmit energy from the point of generation to the point of use with the least loss. The final consideration is to eliminate waste and use the least amount of air for the production process.

This International Standard uses speciality terms which relate the needs of assessment activities to those of compressed air systems. Many terms will appear new to the users of this International Standard who are familiar with general compressed air terms.

A general introduction to energy assessment is given in Annex A.

¹ Extracts from ASME EA-4-2010 were used with permission from ASME. The core elements used are from Scope and Introduction, Organizing the Assessment, Analysis of Data From the Assessment, Reporting and Documentation, and Mandatory Appendices — I, Preliminary Data Collection Matrix.

Compressed air — Energy efficiency — Assessment

WARNING Users of this International Standard are advised that energy-related judgements should not compromise safety issues.

1 Scope

This International Standard sets requirements for conducting and reporting the results of a compressed air system assessment (hereafter referenced as an "assessment") that considers the entire system, from energy inputs to the work performed as the result of these inputs.

This International Standard considers compressed air systems as three functional subsystems:

- supply which includes the conversion of primary energy resource to compressed air energy;
- transmission which includes movement of compressed air energy from where it is generated to where it is used;
- demand which includes the total of all compressed air consumers, including productive end-use applications and various forms of compressed air waste.

This International Standard sets requirements for

- analysing the data from the assessment,
- reporting and documentation of assessment findings, and
- identification of an estimate of energy saving resulting from the assessment process.

This International Standard identifies the roles and responsibilities of those involved in the assessment activity.

This International Standard provides indicative information in Annexes B, C, D, and E of the type of data to be collected to assist in a successful assessment. The information provided is not exhaustive and therefore is not intended to restrict the inclusion of other data. The form and presentation of the information given in the annexes is also not intended to restrict the manner of presentation of the reporting to the client.

2 Normative references

The following documents, in whole or in part, are normatively referenced in this document and are indispensable for its application. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.
