ISBN 978-981-48-9431-9

The content of this Singapore Standard was approved on 17 October 2019 by the Manufacturing Standards Committee (MSC) under the purview of the Singapore Standards Council.

First published, 2019

MSC consists of the following members:

	<b>Name</b>	<b>Representation</b>
<b>Chairman</b>	: Dr John Yong	<i>Individual Capacity</i>
<b>Deputy Chairman</b>	: Mr Brandon Lee	<i>Individual Capacity</i>
<b>Secretary</b>	: Mr Lee Wei Guo	<i>Singapore Manufacturing Federation – Standards Development Organisation</i>
<b>Members</b>	: Dr Karen Chong	<i>Science Engineering Research Council</i>
	Ms Fong Pin Fen	<i>Economic Development Board</i>
	Mr Goh Wee Hong	<i>TÜV SÜD PSB Pte Ltd</i>
	Mr Ho Chi Bao	<i>Enterprise Singapore</i>
	Mr Steven Koh	<i>Singapore Precision Engineering Technology Association</i>
	Ms Lee Wan Sie	<i>Infocomm Media Development Authority</i>
	Dr Jim Li Hui Hong	<i>Individual Capacity</i>
	Dr Lim Ee Meng	<i>National Metrology Centre</i>
	Er. Prof Seeram Ramakrishna	<i>The Institution of Engineers, Singapore</i>
	Mr Sze Thiam Siong	<i>Setsco Services Pte Ltd</i>

MSC sets up the Technical Committee on Smart Manufacturing to oversee the preparation of this standard. The Technical Committee consists of the following members:

	<b>Name</b>	<b>Representation</b>
<b>Co-Chairmen</b>	: Mr Yeoh Pit Wee	<i>Individual Capacity</i>
	Dr Tan Puay Siew	<i>Individual Capacity</i>
<b>Secretary</b>	: Mr Louis Lauw	<i>Singapore Manufacturing Federation – Standards Development Organisation</i>
<b>Members</b>	: Mr Ang Wee Seng	<i>Singapore Semiconductor Industry Association</i>
	Dr Ian Chan Hian Leng	<i>Singapore Institute of Manufacturing Technology</i>
	Mr Cheong Siah Chong	<i>Singapore Industrial Automation Association</i>
	Mr David Chia	<i>Beckhoff Automation Pte Ltd</i>
	Dr Andreas Hauser	<i>TÜV SÜD Asia Pacific Pte Ltd</i>
	Mr Sunny Khoo	<i>Toshiba TEC Singapore Pte Ltd</i>
	Mr Brandon Lee	<i>Singapore Manufacturing Federation</i>
	Prof Lee Loo Hay	<i>National University of Singapore</i>
	Mr Zach Lee	<i>Siemens Industry Software Pte Ltd</i>
	Mr Gerry Ong	<i>SMT Technology Pte Ltd</i>
	Prof John Pang	<i>Nanyang Technological University</i>

**Members** : Er. Prof Seeram Ramakrishna *The Institution of Engineers, Singapore*  
Mr Sim Bak Chor *Infocomm Media Development Authority*  
Mr Tian Boon Quey *TRUMPF Pte Ltd*  
Mr Toh Hong Wee *PBA Systems Pte Ltd*  
Dr Carlos Toro *Advanced Remanufacturing Technology Centre*

The Technical Committee sets up the Working Group on Smart Manufacturing Readiness Level to prepare this standard. The Working Group consists of the following experts who contribute in their *individual capacity*:

**Name**

**Co-Convenors** : Mr Brandon Lee  
Mr Shridhar Ravikumar

**Secretary** : Mr Louis Lauw

**Members** : Dr Ian Chan Hian Leng  
Mr Cheong Siah Chong  
Mr David Chia  
Dr Andreas Hauser  
Mr Michael Leong  
Dr Lin Wei  
Dr Gary Ng  
Prof John Pang  
Dr Tan Puay Siew  
Mr Yeoh Pit Wee

The organisations in which the experts of the Working Group are involved are:

*Advanced Remanufacturing Technology Centre*  
*Beckhoff Automation Pte Ltd*  
*INTECH Process Automation Pte Ltd*  
*Nanyang Technological University*  
*Rockwell Automation Southeast Asia Pte Ltd*  
*SESTO Robotics Pte Ltd*  
*Singapore Industrial Automation Association*  
*Singapore Institute of Manufacturing Technology*  
*TÜV SÜD Asia Pacific Pte Ltd*

## **National Foreword**

This Singapore Standard was prepared by the Working Group on Smart Manufacturing Readiness Level set up by the Technical Committee on Smart Manufacturing under the purview of MSC.

This standard is identical with ISO/IEC 29182-6:2014, "Information technology – Sensor networks: Sensor Network Reference Architecture (SNRA) – Part 6: Applications", published by the International Organization for Standardization.

NOTE – Reference to International Standards are replaced by applicable Singapore Standards and Technical References.

This standard is expected to be used by system integrators, government agencies, testing, inspection and certification bodies, professional institutions, institutes of higher learning and training providers.

Attention is drawn to the possibility that some of the elements of this Singapore Standard may be the subject of patent rights. Enterprise Singapore shall not be held responsible for identifying any or all of such patent rights.

### **NOTE**

- 1. Singapore Standards (SSs) and Technical References (TRs) are reviewed periodically to keep abreast of technical changes, technological developments and industry practices. The changes are documented through the issue of either amendments or revisions. Where SSs are deemed to be stable, i.e. no foreseeable changes in them, they will be classified as "Mature Standards". Mature Standards will not be subject to further review, unless there are requests to review such standards.*
- 2. An SS or TR is voluntary in nature except when it is made mandatory by a regulatory authority. It can also be cited in contracts making its application a business necessity. Users are advised to assess and determine whether the SS or TR is suitable for their intended use or purpose. If required, they should refer to the relevant professionals or experts for advice on the use of the document. Enterprise Singapore and the Singapore Standards Council shall not be liable for any damages whether directly or indirectly suffered by anyone or any organisation as a result of the use of any SS or TR. Although care has been taken to draft this standard, users are also advised to ensure that they apply the information after due diligence.*
- 3. Compliance with a SS or TR does not exempt users from any legal obligations.*

## Foreword

ISO (the International Organization for Standardization) and IEC (the International Electrotechnical Commission) form the specialized system for worldwide standardization. National bodies that are members of ISO or IEC participate in the development of International Standards through technical committees established by the respective organization to deal with particular fields of technical activity. ISO and IEC technical committees collaborate in fields of mutual interest. Other international organizations, governmental and non-governmental, in liaison with ISO and IEC, also take part in the work. In the field of information technology, ISO and IEC have established a joint technical committee, ISO/IEC JTC 1.

The procedures used to develop this document and those intended for its further maintenance are described in the ISO/IEC Directives, Part 1. In particular the different approval criteria needed for the different types of document should be noted. This document was drafted in accordance with the editorial rules of the ISO/IEC Directives, Part 2 (see [www.iso.org/directives](http://www.iso.org/directives)).

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO and IEC shall not be held responsible for identifying any or all such patent rights. Details of any patent rights identified during the development of the document will be in the Introduction and/or on the ISO list of patent declarations received (see [www.iso.org/patents](http://www.iso.org/patents)).

Any trade name used in this document is information given for the convenience of users and does not constitute an endorsement.

For an explanation on the meaning of ISO specific terms and expressions related to conformity assessment, as well as information about ISO's adherence to the WTO principles in the Technical Barriers to Trade (TBT) see the following URL: [Foreword - Supplementary information](#)

The committee responsible for this document is ISO/IEC JTC 1, *Information technology*.

ISO/IEC 29182 consists of the following parts, under the general title *Information technology — Sensor networks: Sensor Network Reference Architecture (SNRA)*:

- *Part 1: General overview and requirements*
- *Part 2: Vocabulary and terminology*
- *Part 3: Reference architecture views*
- *Part 4: Entity models*
- *Part 5: Interface definitions*
- *Part 6: Applications*
- *Part 7: Interoperability guidelines*

## Introduction

A wide range of applications has been proposed for sensor networks. In practice however, sensor networks have been built and deployed for a relatively small number of applications. This is partly due to the lack of a business case for certain applications and partly due to technical challenges in building a non-trivial sensor network of reasonable complexity. The main reason for this impediment is that multidisciplinary expertise, such as sensors, communications and networking, signal processing, electronics, computing, and cyber security is required to design a sensor network. Presently, the design process is so complex that one can leverage little from one sensor network design to another. It appears as if one has to start from almost scratch every time one wishes to design and deploy a sensor network. Yet, upon closer inspection, there are many commonalities in instantiations of sensor networks that realize various applications. These commonalities include similarities in the choice of network architecture, and the entities/functional blocks that are used in the architecture.

The purpose of the ISO/IEC 29182 series is to

- provide guidance to facilitate the design and development of sensor networks,
- improve interoperability of sensor networks, and
- make sensor networks plug-and-play, so that it becomes fairly easy to add/remove sensor nodes to/from an existing sensor network.

The ISO/IEC 29182 series can be used by sensor network designers, software developers, and service providers to meet customer requirements, including any applicable interoperability requirements.

The ISO/IEC 29182 series comprises seven parts. Brief descriptions of these parts are given next. ISO/IEC 29182-1 provides a general overview and the requirements for the sensor network reference architecture.

ISO/IEC 29182-2 provides definitions for the terminology and vocabulary used in the reference architecture.

ISO/IEC 29182-3 presents the reference architecture from various viewpoints, such as business, operational, system, technical, functional, and logical views.

ISO/IEC 29182-4 categorizes the entities comprising the reference architecture into two classes of physical and functional entities and presents models for the entities. ISO/IEC 29182-5 provides detailed information on the interfaces among various entities in the reference architecture.

This part of ISO/IEC 29182 provides detailed information on the development of International Standardized Profiles.

ISO/IEC 29182-7 provides design principles for the reference architecture that take the interoperability requirements into account.

There are no requirements for compliance in ISO/IEC 29182-1 to ISO/IEC 29182-7. Users should ensure that the sensor nodes and the related sensor network are compliant with the application or deployment governing body.

# Information technology — Sensor Network Reference Architecture (SNRA) — Part 6: Applications

## 1 Scope

This part of the ISO/IEC 29182 series, describes and provides

- a compilation of sensor network applications for which International Standardized Profiles (ISPs) are needed,
- guidelines for the structured description of sensor network applications, and
- examples for structured sensor network applications.

This part of ISO/IEC 29182 does not cover ISPs for which drafting rules are described in ISO/IEC TR 10000. Due to the generic character of ISO/IEC 29182 fully developed ISPs will not be included in this International Standard.

## 2 Normative references

The following documents, in whole or in part, are normatively referenced in this document and are indispensable for its application. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.
