The content of this Singapore Standard was approved on 17 October 2019 by the Manufacturing Standards Committee (MSC) under the purview of the Singapore Standards Council.

First published, 2019

MSC consists of the following members:

	Name	Representation
Chairman	: Dr John Yong	<i>Individual Capacity</i>
Deputy Chairman	: Mr Brandon Lee	<i>Individual Capacity</i>
Secretary	: Mr Lee Wei Guo	<i>Singapore Manufacturing Federation – Standards Development Organisation</i>
Members	: Dr Karen Chong	<i>Science Engineering Research Council</i>
	Ms Fong Pin Fen	<i>Economic Development Board</i>
	Mr Goh Wee Hong	<i>TÜV SÜD PSB Pte Ltd</i>
	Mr Ho Chi Bao	<i>Enterprise Singapore</i>
	Mr Steven Koh	<i>Singapore Precision Engineering Technology Association</i>
	Ms Lee Wan Sie	<i>Infocomm Media Development Authority</i>
	Dr Jim Li Hui Hong	<i>Individual Capacity</i>
	Dr Lim Ee Meng	<i>National Metrology Centre</i>
	Er. Prof Seeram Ramakrishna	<i>The Institution of Engineers, Singapore</i>
	Mr Sze Thiam Siong	<i>Setsco Services Pte Ltd</i>

MSC sets up the Technical Committee on Smart Manufacturing to oversee the preparation of this standard. The Technical Committee consists of the following members:

	Name	Representation
Co-Chairmen	: Mr Yeoh Pit Wee	<i>Individual Capacity</i>
	Dr Tan Puay Siew	<i>Individual Capacity</i>
Secretary	: Mr Louis Lauw	<i>Singapore Manufacturing Federation – Standards Development Organisation</i>
Members	: Mr Ang Wee Seng	<i>Singapore Semiconductor Industry Association</i>
	Dr Ian Chan Hian Leng	<i>Singapore Institute of Manufacturing Technology</i>
	Mr Cheong Siah Chong	<i>Singapore Industrial Automation Association</i>
	Mr David Chia	<i>Beckhoff Automation Pte Ltd</i>
	Dr Andreas Hauser	<i>TÜV SÜD Asia Pacific Pte Ltd</i>
	Mr Sunny Khoo	<i>Toshiba TEC Singapore Pte Ltd</i>
	Mr Brandon Lee	<i>Singapore Manufacturing Federation</i>
	Prof Lee Loo Hay	<i>National University of Singapore</i>
	Mr Zach Lee	<i>Siemens Industry Software Pte Ltd</i>
	Mr Gerry Ong	<i>SMT Technology Pte Ltd</i>
	Prof John Pang	<i>Nanyang Technological University</i>

Members	:	Er. Prof Seeram Ramakrishna	<i>The Institution of Engineers, Singapore</i>
		Mr Sim Bak Chor	<i>Infocomm Media Development Authority</i>
		Mr Tian Boon Quey	<i>TRUMPF Pte Ltd</i>
		Mr Toh Hong Wee	<i>PBA Systems Pte Ltd</i>
		Dr Carlos Toro	<i>Advanced Remanufacturing Technology Centre</i>

The Technical Committee sets up the Working Group on Smart Manufacturing Readiness Level to prepare this standard. The Working Group consists of the following experts who contribute in their *individual capacity*:

	Name
Co-Convenors	: Mr Brandon Lee Mr Shridhar Ravikumar
Secretary	: Mr Louis Lauw
Members	: Dr Ian Chan Hian Leng Mr Cheong Siah Chong Mr David Chia Dr Andreas Hauser Mr Michael Leong Dr Lin Wei Dr Gary Ng Prof John Pang Dr Tan Puay Siew Mr Yeoh Pit Wee

The organisations in which the experts of the Working Group are involved are:

Advanced Remanufacturing Technology Centre
Beckhoff Automation Pte Ltd
INTECH Process Automation Pte Ltd
Nanyang Technological University
Rockwell Automation Southeast Asia Pte Ltd
SESTO Robotics Pte Ltd
Singapore Industrial Automation Association
Singapore Institute of Manufacturing Technology
TÜV SÜD Asia Pacific Pte Ltd

National Foreword

This Singapore Standard was prepared by the Working Group on Smart Manufacturing Readiness Level set up by the Technical Committee on Smart Manufacturing under the purview of the MSC.

This standard is identical with IEC 62264-3:2016, “Enterprise-control system integration – Part 3: Activity models of manufacturing operations management”, published by the International Electrotechnical Commission.

NOTE – Reference to International Standards are replaced by applicable Singapore Standards and Technical References

This standard is expected to be used by system integrators, government agencies, testing, inspection and certification bodies, professional institutions, institutes of higher learning and training providers.

Attention is drawn to the possibility that some of the elements of this Singapore Standard may be the subject of patent rights. Enterprise Singapore shall not be held responsible for identifying any or all of such patent rights.

NOTE

- 1. Singapore Standards (SSs) and Technical References (TRs) are reviewed periodically to keep abreast of technical changes, technological developments and industry practices. The changes are documented through the issue of either amendments or revisions. Where SSs are deemed to be stable, i.e. no foreseeable changes in them, they will be classified as “Mature Standards”. Mature Standards will not be subject to further review, unless there are requests to review such standards.*
- 2. An SS or TR is voluntary in nature except when it is made mandatory by a regulatory authority. It can also be cited in contracts making its application a business necessity. Users are advised to assess and determine whether the SS or TR is suitable for their intended use or purpose. If required, they should refer to the relevant professionals or experts for advice on the use of the document. Enterprise Singapore and the Singapore Standards Council shall not be liable for any damages whether directly or indirectly suffered by anyone or any organisation as a result of the use of any SS or TR. Although care has been taken to draft this standard, users are also advised to ensure that they apply the information after due diligence.*
- 3. Compliance with a SS or TR does not exempt users from any legal obligations.*

INTERNATIONAL ELECTROTECHNICAL COMMISSION

ENTERPRISE-CONTROL SYSTEM INTEGRATION –

Part 3: Activity models of manufacturing operations management

FOREWORD

- 1) The International Electrotechnical Commission (IEC) is a worldwide organization for standardization comprising all national electrotechnical committees (IEC National Committees). The object of IEC is to promote international co-operation on all questions concerning standardization in the electrical and electronic fields. To this end and in addition to other activities, IEC publishes International Standards, Technical Specifications, Technical Reports, Publicly Available Specifications (PAS) and Guides (hereafter referred to as "IEC Publication(s)"). Their preparation is entrusted to technical committees; any IEC National Committee interested in the subject dealt with may participate in this preparatory work. International, governmental and non-governmental organizations liaising with the IEC also participate in this preparation. IEC collaborates closely with the International Organization for Standardization (ISO) in accordance with conditions determined by agreement between the two organizations.
- 2) The formal decisions or agreements of IEC on technical matters express, as nearly as possible, an international consensus of opinion on the relevant subjects since each technical committee has representation from all interested IEC National Committees.
- 3) IEC Publications have the form of recommendations for international use and are accepted by IEC National Committees in that sense. While all reasonable efforts are made to ensure that the technical content of IEC Publications is accurate, IEC cannot be held responsible for the way in which they are used or for any misinterpretation by any end user.
- 4) In order to promote international uniformity, IEC National Committees undertake to apply IEC Publications transparently to the maximum extent possible in their national and regional publications. Any divergence between any IEC Publication and the corresponding national or regional publication shall be clearly indicated in the latter.
- 5) IEC provides no marking procedure to indicate its approval and cannot be rendered responsible for any equipment declared to be in conformity with an IEC Publication.
- 6) All users should ensure that they have the latest edition of this publication.
- 7) No liability shall attach to IEC or its directors, employees, servants or agents including individual experts and members of its technical committees and IEC National Committees for any personal injury, property damage or other damage of any nature whatsoever, whether direct or indirect, or for costs (including legal fees) and expenses arising out of the publication, use of, or reliance upon, this IEC Publication or any other IEC Publications.
- 8) Attention is drawn to the Normative references cited in this publication. Use of the referenced publications is indispensable for the correct application of this publication.
- 9) Attention is drawn to the possibility that some of the elements of this IEC Publication may be the subject of patent rights. IEC shall not be held responsible for identifying any or all such patent rights.

International Standard IEC 62264-3 has been prepared by subcommittee 65E: Devices and integration in enterprise systems, of IEC technical committee 65: Industrial-process measurement, control and automation and ISO SC5, JWG 15, of ISO technical committee 184: Enterprise-control system integration.

It is published as a double logo standard.

This second edition cancels and replaces the first edition published in 2007. This edition constitutes a technical revision.

This edition includes the following significant technical changes with respect to the previous edition:

- a) 4.1 Manufacturing Operations Management was moved to Part 1 and therefore was removed from Part 3;
- b) 4.2 Functional hierarchy was moved to Part 1 and therefore was removed from Part 3;

- c) 4.4 Criterion for defining activities below Level 4 was moved to Part 1 and therefore was removed from Part 3;
- d) 4.5 Categories of production information was moved to Part 1 and therefore was removed from Part 3;
- e) 4.6 Manufacturing operations information was moved to Part 1 and therefore was removed from Part 3;
- f) 5.3 Expanded equipment hierarchy model was moved to Part 1 and therefore was removed from Part 3;
- g) 5.4 Expanded decision hierarchy model was removed from Part 3. The corresponding section was removed from Part 1 and replaced with a reference to ISO 15704;
- h) Annex A (informative) Other enterprise activities affecting manufacturing operations was moved to Part 1 and therefore was removed from Part 3;
- i) Annex D (informative) Associated standards was moved to Part 1 and therefore was removed from Part 3;
- j) Annex F (informative) Applying the decision hierarchy model to manufacturing operations management was removed from Part 3. The corresponding section was removed from Part 1 and replaced with a reference to ISO 15704;
- k) Annex G (informative) Mapping PSLX ontology to manufacturing operations management was removed from Part 3. The committee felt that this section is more appropriate as a PSLX white paper or TR;
- l) The names for data were changed to match the Part 4 standard names. These name changes were made in all figures and in the text. The following data names were changed or added:
 - 1) Detailed Production Schedule changed to Work Schedule,
 - 2) Production Dispatch List changed to Job list,
 - 3) Production Work Order changed to Job Order,
 - 4) Work Order changed to Job Order,
 - 5) Detailed Maintenance Schedule changed to Work Schedule,
 - 6) Detailed Inventory Schedule changed to Work Schedule,
 - 7) The addition of Work Masters as objects that define how work is to be done,
 - 8) The addition of the management of Work Calendars as a task in resource management,
 - 9) The addition of the creation of Work Records as a task in tracing.

The text of this standard is based on the following documents:

CDV	Report on voting
65E/456/CDV	65E/513/RVC

Full information on the voting for the approval of this standard can be found in the report on voting indicated in the above table. In ISO, the standard has been approved by 10 P-members out of 10 having cast a vote.

This publication has been drafted in accordance with ISO/IEC Directives, Part 2.

A list of all parts in the IEC 62264 series, published under the general title *Enterprise-Control system integration*, can be found on the IEC website.

The committee has decided that the contents of this publication will remain unchanged until the stability date indicated on the IEC website under "<http://webstore.iec.ch>" in the data related to the specific publication. At this date, the publication will be

- reconfirmed,
- withdrawn,
- replaced by a revised edition, or
- amended.

IMPORTANT – The 'colour inside' logo on the cover page of this publication indicates that it contains colours which are considered to be useful for the correct understanding of its contents. Users should therefore print this document using a colour printer.

INTRODUCTION

This part of IEC 62264 shows activity models and data flows for manufacturing information that enables enterprise-control system integration. The modelled activities operate between Level 4 logistics and planning functions and Level 2 manual and automated process control functions. The models are consistent with the object models given in IEC 62264-2 and the Level 3 (manufacturing operations and control) definitions.

The goal of the standard is to reduce the risk, cost and errors associated with implementing enterprise systems and manufacturing operations systems in such a way that they inter-operate and easily integrate. The standard may also be used to reduce the effort associated with implementing new product offerings.

This standard provides models and terminology for defining the activities of manufacturing operations management. The models and terminology defined in this standard are:

- to emphasize the good practices of manufacturing operations;
- to be used to improve existing manufacturing operations systems;
- to be applied regardless of the degree of automation.

Some potential benefits produced when applying the standard may include:

- reducing the time to reach full production levels for new products;
- enabling vendors to supply appropriate tools for manufacturing operations;
- enabling more uniform and consistent identification of manufacturing needs;
- reducing the cost of automating manufacturing processes;
- optimizing supply chains;
- improving efficiency in life-cycle engineering efforts.

It is not the intent of this part of the standard to:

- suggest that there is only one way of implementing manufacturing operations;
- force users to abandon their current way of handling manufacturing operations;
- restrict development in the area of manufacturing operations;
- restrict use only to manufacturing industries.

ENTERPRISE-CONTROL SYSTEM INTEGRATION –

Part 3: Activity models of manufacturing operations management

1 Scope

This part of IEC 62264 defines activity models of manufacturing operations management that enable enterprise system to control system integration. The activities defined in this document are consistent with the object models definitions given in IEC 62264-1. The modelled activities operate between business planning and logistics functions, defined as the Level 4 functions and the process control functions, defined as the Level 2 functions of IEC 62264-1. The scope of this document is limited to:

- a model of the activities associated with manufacturing operations management, Level 3 functions;
- an identification of some of the data exchanged between Level 3 activities.

2 Normative references

The following documents are referred to in the text in such a way that some or all of their content constitutes requirements of this document. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.
