The content of this Singapore Standard was approved on 13 January 2021 by the Environment and Resources Standards Committee (ERSC) under the purview of the Singapore Standards Council.

First published, 2021

ERSC consists of the following members:

	<b>Name</b>	<b>Representation</b>
<b>Chairman</b>	: Mr Wim Roels	<i>Individual Capacity</i>
<b>Deputy Chairmen</b>	: Mr Dalson Chung Ms Neo Gim Huay	<i>National Environment Agency</i> <i>Individual Capacity</i>
<b>Advisor</b>	: Prof Reginald Tan	<i>Individual Capacity</i>
<b>Secretary</b>	: Ms Elane Ng	<i>Standards Development Organisation @ Singapore Chemical Industry Council</i>
<b>Members</b>	: Dr Adil Dhalla	<i>Nanyang Environment and Water Research Institute</i>
	Dr Chiam Sing Yang	<i>Agency for Science, Technology and Research</i>
	Assoc Prof Winston Chow	<i>Singapore Management University</i>
	Mr Dinesh Sharma	<i>Singapore Water Association</i>
	Mr Michael Ho	<i>Waste Management and Recycling Association of Singapore</i>
	Ms Kavita Gandhi	<i>Sustainable Energy Association of Singapore</i>
	Mr Terence Koh	<i>Singapore Chemical Industry Council</i>
	Mr Mikkel Larsen	<i>DBS Bank Ltd</i>
	Mr Lim Yeow Keong	<i>Sembcorp Utilities</i>
	Ms Marika Lindstrom	<i>Unilever Asia Ltd</i>
	Dr Pang Chee Meng	<i>PUB, the National Water Agency</i>
	Dr Thomas Reindl	<i>Solar Energy Research Institute of Singapore</i>
	Mr Steve Seah	<i>SP Group</i>
	Mr Kenneth Sim	<i>Ministry of Sustainability and the Environment</i>
	Dr Victor Sim Siang Tze	<i>Surbana Jurong Consultants Pte Ltd</i>
	Ms Yvonne Soh	<i>Singapore Green Building Council</i>
	Mr Tan Li Khiam	<i>ExxonMobil Asia Pacific Pte Ltd</i>
	Ms Jen Teo	<i>Singapore Environment Council</i>
	Mr Toh Eng Shyan	<i>Building and Construction Authority</i>
	Ms Rose Tong	<i>Singapore Retailers Association</i>
	Mr Yap Ong Heng	<i>Ministry of Transport</i>
	Mr Simon Yeo	<i>Ernst and Young LLP</i>
	Mr Yeoh Choon Jin	<i>Enterprise Singapore</i>
<b>Co-opted Member</b>	: Dr Karthik Kumar	<i>Individual Capacity</i>

ERSC set up the Technical Committee on Environmental Management to oversee the preparation of this standard. The Technical Committee consists of the following members:

	<b>Name</b>	<b>Representation</b>
<b>Chairman</b>	: Dr Song Bin	<i>Individual Capacity</i>
<b>Deputy Chairman</b>	: Mr Rahul Kar	<i>Individual Capacity</i>
<b>Secretary</b>	: Mr Kaung Mon Thu	<i>Standards Development Organisation @ Singapore Chemical Industry Council</i>
<b>Members</b>	: Mr Benedict Chia	<i>National Climate Change Secretariat</i>
	Mr Chiang Chian Wui	<i>PUB, the National Water Agency</i>
	Mr Heng Hoon Jee	<i>Individual Capacity</i>
	Mr Ho Hiang Kwee	<i>National Climate Change Secretariat</i>
	Mr Khoo Hsien Hui	<i>Institute of Chemical and Engineering Sciences</i>
	Mr Lee Wan Jean	<i>National Climate Change Secretariat</i>
	Mr Lem Yang Lim	<i>Singapore Green Building Council</i>
	Dr Reginald Tan	<i>National University of Singapore</i>
	Mr Vincent Teo	<i>Singapore Environment Council</i>
	Mr Wan Lek Kong	<i>National Environment Agency</i>
	Er. Yong Siew Hwa	<i>Building and Construction Authority</i>
	Ms Zainab Binte Ibrahim	<i>TÜV SÜD PSB Pte Ltd</i>
	Dr Zhou Yi	<i>The Institution of Engineers, Singapore</i>

The Technical Committee set up the Working Group on Greenhouse Gases and Product Life Cycle to prepare this standard. The Working Group consists of the following experts who contribute in their *individual capacity*:

	<b>Name</b>
<b>Convenor</b>	: Dr Song Bin
<b>Members</b>	: Ms Winnie Chia
	Mr Ho Hiang Kwee
	Mr K Sadashiv
	Mr Lee Wan Jean
	Mr Praveen Tekchandani
	Mr Rahul Kar
	Mr Tan Boon Chong
	Mr Louis Wong

The organisations in which the experts of the Working Group are involved are:

*Deloitte & Touche Financial Advisory Services Pte Ltd*

*E2C Consulting Pte Ltd*

*Ernst and Young LLP*

*National Climate Change Secretariat*

*National Environment Agency*

*Singapore Institute of Manufacturing Technology*

6.1 Identification of GHG sources and sinks.....	21
6.2 Selection of quantification approach .....	22
6.2.1 General .....	22
6.2.2 Data selection and collection used for quantification .....	22
6.2.3 Selection or development of GHG quantification model.....	22
6.3 Calculation of GHG emissions and removals .....	23
6.4 Base-year GHG inventory .....	23
6.4.1 Selection and establishment of base year.....	23
6.4.2 Review of base-year GHG inventory.....	23
7 Mitigation activities .....	24
7.1 GHG emission reduction and removal enhancement initiatives .....	24
7.2 GHG emission reduction or removal enhancement projects .....	25
7.3 GHG emission reduction or removal enhancement targets.....	25
8 GHG inventory quality management.....	25
8.1 GHG information management.....	25
8.2 Document retention and record keeping.....	26
8.3 Assessing uncertainty .....	26
9 GHG reporting .....	27

9.1	General .....	27
9.2	Planning the GHG report.....	27
9.3	GHG report content.....	27
9.3.1	Required information.....	27
9.3.2	Recommended information.....	28
9.3.3	Optional information and associated requirements.....	29
10	Organization’s role in verification activities.....	29
Annex A (informative)	Process to consolidate data .....	30
Annex B (informative)	Direct and indirect GHG emissions categorization .....	32
Annex C (informative)	Guidance on the selection, collection and use of data for GHG quantification approach for direct emissions .....	39
Annex D (normative)	Treatment of biogenic GHG emissions and CO <sub>2</sub> removals.....	47
Annex E (normative)	Treatment of electricity.....	48
Annex F (informative)	GHG inventory report structure and organization .....	50
Annex G (informative)	Agricultural and forestry guidance.....	53
Annex H (informative)	Guidance for the process of identifying significant indirect GHG emissions .....	60
Bibliography	.....	62

## National Foreword

This Singapore Standard was prepared by the Working Group on Greenhouse Gases and Product Life Cycle set up by the Technical Committee on Environmental Management under the purview of ERSC.

This standard is an identical adoption of ISO 14064-1 : 2018, 'Greenhouse gases – Part 1: Specification with guidance at the organization level for quantification and reporting of greenhouse gas emissions and removals', published by the International Organization for Standardization.

NOTE 1 – Reference to International Standards are replaced by applicable Singapore Standards/Technical References.

NOTE 2 – Where numerical values are expressed as decimals, the comma is read as a full point.

Attention is drawn to the possibility that some of the elements of this Singapore Standard may be the subject of patent rights. Enterprise Singapore shall not be held responsible for identifying any or all of such patent rights.

### NOTE

1. *Singapore Standards (SSs) and Technical References (TRs) are reviewed periodically to keep abreast of technical changes, technological developments and industry practices. The changes are documented through the issue of either amendments or revisions. Where SSs are deemed to be stable, i.e. no foreseeable changes in them, they will be classified as "Mature Standards". Mature Standards will not be subject to further review, unless there are requests to review such standards.*
2. *An SS or TR is voluntary in nature except when it is made mandatory by a regulatory authority. It can also be cited in contracts making its application a business necessity. Users are advised to assess and determine whether the SS or TR is suitable for their intended use or purpose. If required, they should refer to the relevant professionals or experts for advice on the use of the document. Enterprise Singapore and the Singapore Standards Council shall not be liable for any damages whether directly or indirectly suffered by anyone or any organisation as a result of the use of any SS or TR. Although care has been taken to draft this standard, users are also advised to ensure that they apply the information after due diligence.*
3. *Compliance with a SS or TR does not exempt users from any legal obligations.*

## Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

The procedures used to develop this document and those intended for its further maintenance are described in the ISO/IEC Directives, Part 1. In particular, the different approval criteria needed for the different types of ISO documents should be noted. This document was drafted in accordance with the editorial rules of the ISO/IEC Directives, Part 2 (see [www.iso.org/directives](http://www.iso.org/directives)).

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights. Details of any patent rights identified during the development of the document will be in the Introduction and/or on the ISO list of patent declarations received (see [www.iso.org/patents](http://www.iso.org/patents)).

Any trade name used in this document is information given for the convenience of users and does not constitute an endorsement.

For an explanation of the voluntary nature of standards, the meaning of ISO specific terms and expressions related to conformity assessment, as well as information about ISO's adherence to the World Trade Organization (WTO) principles in the Technical Barriers to Trade (TBT) see [www.iso.org/iso/foreword.html](http://www.iso.org/iso/foreword.html).

This document was prepared by Technical Committee ISO/TC 207, *Environmental management*, Subcommittee SC 7, *Greenhouse gas management and related activities*.

This second edition cancels and replaces the first edition (ISO 14064-1:2006), which has been technically revised.

The main changes compared to the previous edition are as follows.

- A new approach has been introduced to reporting boundaries, facilitating the inclusion and expansion of indirect emissions. This change is a response to a growing number of organizations that are recognizing the importance and significance of indirect emissions and are developing GHG inventories that include more types of indirect emissions across the value chain.
- The GHG emissions category “other indirect GHG emissions” has been renamed “indirect GHG emissions.” Requirements and guidance have been provided for classification of indirect GHG emissions into five specific categories. “Operational boundaries” has been renamed “reporting boundaries” for clarification and simplicity.
- New requirements and guidance for GHG quantification and reporting of specific items, such as the treatment of biogenic carbon and GHG emissions related to electricity, have been added for clarification.

A list of all parts in the ISO 14064 series can be found on the ISO website.

This document is the generic standard for the quantification and reporting of greenhouse gas emission and removals at an organizational level.

Any feedback or questions on this document should be directed to the user's national standards body. A complete listing of these bodies can be found at [www.iso.org/members.html](http://www.iso.org/members.html).

## **Introduction**

### **0.1 Background**

Climate change arising from anthropogenic activity has been identified as one of the greatest challenges facing the world and will continue to affect business and citizens over future decades.

Climate change has implications for both human and natural systems and could lead to significant impacts on resource availability, economic activity and human wellbeing. In response, international, regional, national and local initiatives are being developed and implemented by public and private sectors to mitigate greenhouse gas (GHG) concentrations in the Earth's atmosphere, as well as to facilitate adaptation to climate change.

There is a need for an effective and progressive response to the urgent threat of climate change on the basis of the best available scientific knowledge. ISO produces documents that support the transformation of scientific knowledge into tools that will help address climate change.

GHG initiatives on mitigation rely on the quantification, monitoring, reporting and verification of GHG emissions and/or removals.

The ISO 14060 family provides clarity and consistency for quantifying, monitoring, reporting and validating or verifying GHG emissions and removals to support sustainable development through a low-carbon economy and to benefit organizations, project proponents and interested parties worldwide. Specifically, the use of the ISO 14060 family:

- enhances the environmental integrity of GHG quantification;
- enhances the credibility, consistency and transparency of GHG quantification, monitoring, reporting, verification and validation;
- facilitates the development and implementation of GHG management strategies and plans;
- facilitates the development and implementation of mitigation actions through emission reductions or removal enhancements;
- facilitates the ability to track performance and progress in the reduction of GHG emissions and/or increase in GHG removals.

Applications of the ISO 14060 family include:

- corporate decisions, such as identifying emission reduction opportunities and increasing profitability by reducing energy consumption;
- risks and opportunities management, such as climate-related risks, including financial, regulatory, supply chain, product and customer, litigation, reputational risks and its opportunity for business (e.g. new market, new business model);
- voluntary initiatives, such as participation in voluntary GHG registries or sustainability reporting initiatives;
- GHG markets, such as the buying and selling of GHG allowances or credits;
- regulatory/government GHG programmes, such as credit for early action, agreements or national and local reporting initiatives.

This document details principles and requirements for designing, developing, managing and reporting organization-level GHG inventories. It includes requirements for determining GHG emission and removal boundaries, quantifying an organization's GHG emissions and removals, and identifying specific company actions or activities aimed at improving GHG management. It also includes requirements and guidance on inventory quality management, reporting, internal auditing and the organization's responsibilities in verification activities.

ISO 14064-2 details principles and requirements for determining baselines, and monitoring, quantifying and reporting of project emissions. It focuses on GHG projects or project-based activities specifically designed to reduce GHG emissions and/or enhance GHG removals. It provides the basis for GHG projects to be verified and validated.

ISO 14064-3 details requirements for verifying GHG statements related to GHG inventories, GHG projects, and carbon footprints of products. It describes the process for verification or validation, including verification or validation planning, assessment procedures, and the evaluation of organizational, project and product GHG statements.

ISO 14065 defines requirements for bodies that validate and verify GHG statements. Its requirements cover impartiality, competence, communication, validation and verification processes, appeals, complaints and the management system of validation and verification bodies. It can be used as a basis for accreditation and other forms of recognition in relation to the impartiality, competence and consistency of validation and verification bodies.

ISO 14066 specifies competence requirements for validation teams and verification teams. It includes principles and specifies competence requirements based on the tasks that validation teams or verification teams have to be able to perform.

ISO 14067 defines the principles, requirements and guidelines for the quantification of the carbon footprint of products. The aim of ISO 14067 is to quantify GHG emissions associated with the life cycle stages of a product, beginning with resource extraction and raw material sourcing and extending through the production, use and end-of-life phases of the product.

ISO/TR 14069 assists users in the application of this document, providing guidelines and examples for improving transparency in the quantification of emissions and their reporting. It does not provide additional guidance to this document.

Figure 1 illustrates the relationship among the ISO 14060 family of GHG standards.

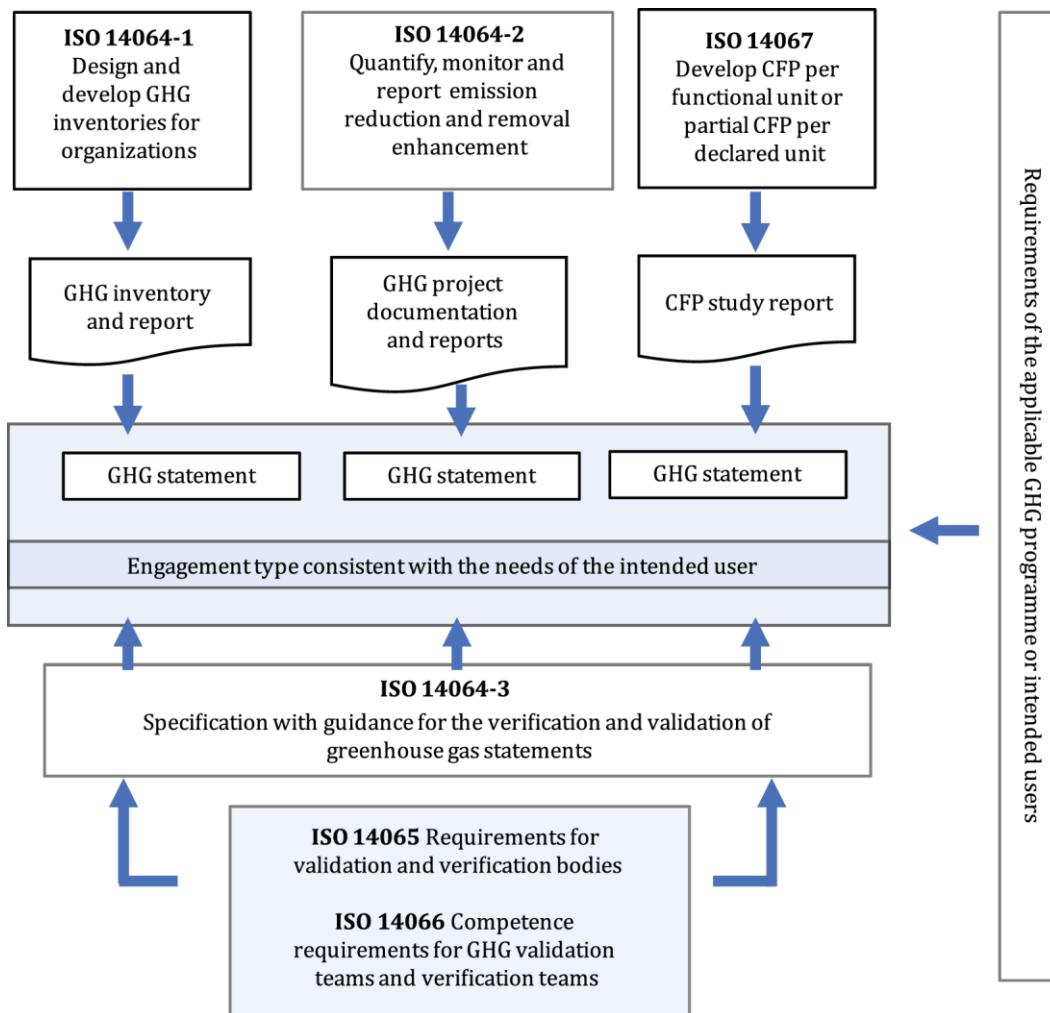

Figure 1 — Relationship among the ISO 14060 family of GHG standards

## 0.2 Base GHG quantification concepts used by this document

This document incorporates many key concepts developed over a number of years. References listed in the Bibliography provide (examples of) additional guidance on these concepts.

## 0.3 Significance of the terms “document”, “explain” and “justify” in this document

Some clauses require users of this document to document, explain and justify the use of certain approaches or decisions taken.

Document involves capturing and storing the pertinent information in writing. Explain involves two additional criteria:

- a) describe how approaches were used or decisions taken, and
- b) describe why approaches were chosen or decisions made.

Justify involves an additional third and fourth criteria:

- c) explain why alternative approaches were not chosen, and
- d) provide supporting data or analysis.

# **Greenhouse gases — Part 1: Specification with guidance at the organization level for quantification and reporting of greenhouse gas emissions and removals**

## **1 Scope**

This document specifies principles and requirements at the organization level for the quantification and reporting of greenhouse gas (GHG) emissions and removals. It includes requirements for the design, development, management, reporting and verification of an organization's GHG inventory.

The ISO 14064 series is GHG programme neutral. If a GHG programme is applicable, requirements of that GHG programme are additional to the requirements of the ISO 14064 series.

## **2 Normative references**

There are no normative references in this document.
