National Foreword

This Singapore Standard was prepared by the Working Group on Facility Management set up by the Technical Committee on Building Maintenance and Management under the purview of the Building and Construction Standards Committee.

This standard is an identical adoption of ISO 41011:2024, “Facility Management – Vocabulary”, published by the International Organization for Standardization.

Attention is drawn to the possibility that some of the elements of this Singapore Standard may be the subject of patent rights. Enterprise Singapore shall not be held responsible for identifying any or all of such patent rights.

NOTE

1. *Singapore Standards (SSs) and Technical References (TRs) are reviewed periodically to keep abreast of technical changes, technological developments and industry practices. The changes are documented through the issue of either amendments or revisions. Where SSs are deemed to be stable, i.e. no foreseeable changes in them, they will be classified as “mature standards”. Mature standards will not be subject to further review, unless there are requests to review such standards.*
2. *An SS or TR is voluntary in nature except when it is made mandatory by a regulatory authority. It can also be cited in contracts making its application a business necessity. Users are advised to assess and determine whether the SS or TR is suitable for their intended use or purpose. If required, they should refer to the relevant professionals or experts for advice on the use of the document. Enterprise Singapore and the Singapore Standards Council shall not be liable for any damages whether directly or indirectly suffered by anyone or any organisation as a result of the use of any SS or TR. Although care has been taken to draft this standard, users are also advised to ensure that they apply the information after due diligence.*
3. *Compliance with a SS or TR does not exempt users from any legal obligations.*

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

The procedures used to develop this document and those intended for its further maintenance are described in the ISO/IEC Directives, Part 1. In particular, the different approval criteria needed for the different types of ISO document should be noted. This document was drafted in accordance with the editorial rules of the ISO/IEC Directives, Part 2 (see www.iso.org/directives).

ISO draws attention to the possibility that the implementation of this document may involve the use of (a) patent(s). ISO takes no position concerning the evidence, validity or applicability of any claimed patent rights in respect thereof. As of the date of publication of this document, ISO had not received notice of (a) patent(s) which may be required to implement this document. However, implementers are cautioned that this may not represent the latest information, which may be obtained from the patent database available at www.iso.org/patents. ISO shall not be held responsible for identifying any or all such patent rights.

Any trade name used in this document is information given for the convenience of users and does not constitute an endorsement.

For an explanation of the voluntary nature of standards, the meaning of ISO specific terms and expressions related to conformity assessment, as well as information about ISO's adherence to the World Trade Organization (WTO) principles in the Technical Barriers to Trade (TBT), see www.iso.org/iso/foreword.html.

This document was prepared by Technical Committee ISO/TC 267, *Facility management*, in collaboration with the European Committee for Standardization (CEN) Technical Committee CEN/TC 348, *Facility Management*, in accordance with the Agreement on technical cooperation between ISO and CEN (Vienna Agreement).

This second edition cancels and replaces the first edition (ISO 41011:2017), which has been technically revised.

The main changes are as follows:

- categories of terms related to technology (3.9) and sustainability (3.10) have added to the document;
- the subclauses 0.1, 0.2 and 0.3 in the introduction have been updated;
- the following terms have been added: facility management organization (3.1.4), workspace (3.1.14), constructed asset (3.2.4), service life (3.2.8), communication plan (3.3.1), cross-cultural impact (3.3.3), responsibility assignment matrix (3.3.6), stakeholder impact assessment (3.3.8), co-sourcing (3.4.3), performance specification (3.4.11), procurement plan (3.4.13), self-delivery service (3.4.14), facility plan (3.5.6), life cycle assessment (3.5.7), outcome (3.5.9), output (3.5.10), post-occupancy evaluation (3.5.11), work stage (3.5.16), acquisition cost (3.6.1), circular economy (3.6.3), construction cost (3.6.4), cost-benefit analysis (3.6.5), end-of-life cost (3.6.6), maintenance cost (3.6.8), operation cost (3.6.10), renewal cost (3.6.11), whole-life cost (3.6.12), facility life cycle (3.7.8), facility management strategy (3.7.10), maintenance (3.7.11), operational level (3.7.14), resilience (3.7.17), strategic facility plan (3.7.19), indoor environmental quality (3.8.4) computer aided facility management (3.9.1), smart building (3.9.2) greenhouse gas (3.10.1), greenhouse gas emission (3.10.2), sustainable development (3.10.5) and well-being (3.10.6);
- the terms have been alphabetized in subclauses;
- the term “policy” has been changed to “facility management policy”;
- the term “user” has become the preferred term and has replaced “end user”;

ISO 41011:2024(en)

- the terminological entry for “interested party” has been removed and this term has been added as an admitted term to the terminological entry for “stakeholder”.

Any feedback or questions on this document should be directed to the user’s national standards body. A complete listing of these bodies can be found at www.iso.org/members.html.

Introduction

0.1 Purpose

The International Standards developed by ISO/TC 267 describe the characteristics of facility management and are intended for use in both the private and public sectors.

0.2 Relationship with other standards

Common practices have been identified that can be applied across the build environment where people work, live and play. This includes a wide variety of market sectors, organizational types, process activities and geographies. Their implementation will help to:

- improve quality, productivity and financial performance;
- enhance sustainability and reduce negative environmental impact;
- develop functional and motivating built environments;
- maintain regulatory compliance and provide safe workplaces;
- optimize facility life cycle performance and costs;
- improve resilience and adaptability;
- project an organization's identity and image more successfully.

0.3 Target audience

This document is primarily intended for use by:

- those considering how to improve the value for their organization from their facility management base;
- those involved in the establishment, implementation, maintenance and improvement of a facility;
- those involved in the planning, design, implementation and review of facility management activities.

Facility management — Vocabulary

1 Scope

This document defines terms used in facility management.

2 Normative references

There are no normative references in this document.
