National Foreword

This Singapore Standard was prepared by the Working Group on Greenhouse gases and Product Life Cycle Assessment set up by the Technical Committee on Environmental Management and Sustainable Finance under the purview of the Environment and Resources Standards Committee.

This standard is an identical adoption of ISO 14080:2018, “Greenhouse gas management and related activities – Framework and principles for methodologies on climate actions”, published by the International Organization for Standardization.

NOTE – Where numerical values are expressed as decimals, the comma is read as a full point.

Attention is drawn to the possibility that some of the elements of this Singapore Standard may be the subject of patent rights. Enterprise Singapore shall not be held responsible for identifying any or all of such patent rights.

NOTE

1. *Singapore Standards (SSs) and Technical References (TRs) are reviewed periodically to keep abreast of technical changes, technological developments and industry practices. The changes are documented through the issue of either amendments or revisions. Where SSs are deemed to be stable, i.e. no foreseeable changes in them, they will be classified as “mature standards”. Mature standards will not be subject to further review, unless there are requests to review such standards.*
2. *An SS or TR is voluntary in nature except when it is made mandatory by a regulatory authority. It can also be cited in contracts making its application a business necessity. Users are advised to assess and determine whether the SS or TR is suitable for their intended use or purpose. If required, they should refer to the relevant professionals or experts for advice on the use of the document. Enterprise Singapore and the Singapore Standards Council shall not be liable for any damages whether directly or indirectly suffered by anyone or any organisation as a result of the use of any SS or TR. Although care has been taken to draft this standard, users are also advised to ensure that they apply the information after due diligence.*
3. *Compliance with a SS or TR does not exempt users from any legal obligations.*

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

The procedures used to develop this document and those intended for its further maintenance are described in the ISO/IEC Directives, Part 1. In particular the different approval criteria needed for the different types of ISO documents should be noted. This document was drafted in accordance with the editorial rules of the ISO/IEC Directives, Part 2 (see www.iso.org/directives).

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights. Details of any patent rights identified during the development of the document will be in the Introduction and/or on the ISO list of patent declarations received (see www.iso.org/patents).

Any trade name used in this document is information given for the convenience of users and does not constitute an endorsement.

For an explanation on the voluntary nature of standards, the meaning of ISO specific terms and expressions related to conformity assessment, as well as information about ISO's adherence to the World Trade Organization (WTO) principles in the Technical Barriers to Trade (TBT) see the following URL: www.iso.org/iso/foreword.html.

This document was prepared by Technical Committee ISO/TC 207, *Environmental management*, Subcommittee SC 7, *Greenhouse gas management and related activities*.

Introduction

The framework in this document provides guidance to countries and other interested parties on a consistent, comparable and transparent approach to selecting, proposing, using, revising and maintaining methodologies on climate action. These methodologies are designed to be reproducible and aim to help climate action and its ambitious goals to be achieved.

The framework supports various organizations, such as:

- government and non-state actors, including local government, industrial associations, technical institutions, and methodology developers and users;
- private and public organizations, environmental NGOs, and other organizations that use climate action methodologies;
- financial institutions that support climate actions.

In addition to methodologies, the framework can also be developed and used for policies and measures.

The developed framework can be used to identify potential and justifiable actions for both climate change mitigation and adaptation.

This document supports many objectives, such as:

- engaging on a voluntary basis in cooperative approaches that involve the use of internationally transferred mitigation outcomes towards nationally determined contributions;
- promoting sustainable development and ensuring credibility and transparency, including in governance;
- increasing accountability to ensure, for example, the avoidance of double counting;
- setting goals for enhancing adaptive capacity, strengthening resilience and reducing vulnerability to climate change;
- contributing to sustainable development and ensuring an adequate adaptation response in the context of the temperature goal;
- cooperating internationally on adaptation efforts, recognizing the importance of taking into account the needs of developing countries.

This document can be used to develop a framework that is compatible with relevant local, national, regional and international climate change policies, and strategies of a country or other interested parties. The framework and its methodology process support a long-term vision on the importance of fully realizing technological and non-technological innovation transfer in order to improve resilience to climate change and to reduce emissions. This document supports the “pledge and review” system with measures undertaken to collect and compile the relevant climate data and relevant information relating to the long-term vision. This document supports all countries, both developed and developing, to better understand and develop their nationally determined contributions.

It aims to increase transparency related to measurement, reporting and verification (MRV), and to reduce risks for cooperative mitigation and adaptation actions. It recognizes the importance of international cooperation on adaptation and mitigation efforts and of taking into account the needs of developing countries.

It highlights the importance of averting, minimizing and addressing loss and damage associated with the adverse effects of climate change, including extreme weather events and slow onset events, and the role of sustainable development in reducing the risk of loss and damage.

It takes into account the Cancun Adaptation Framework^[20], including identifying and encouraging good practices, effective adaptation practices, adaptation needs and priorities, support provided and received for adaptation actions and efforts, challenges and gaps.

This document provides a framework to result in:

- adoption of the methodology among best practices and best available technology (BAT);
- improvements in the quality of methodologies;
- improvements in the processes for methodology development;
- improvements in transparency and clarity of climate actions.

[Figure 1](#) illustrates the role and purpose of this document.

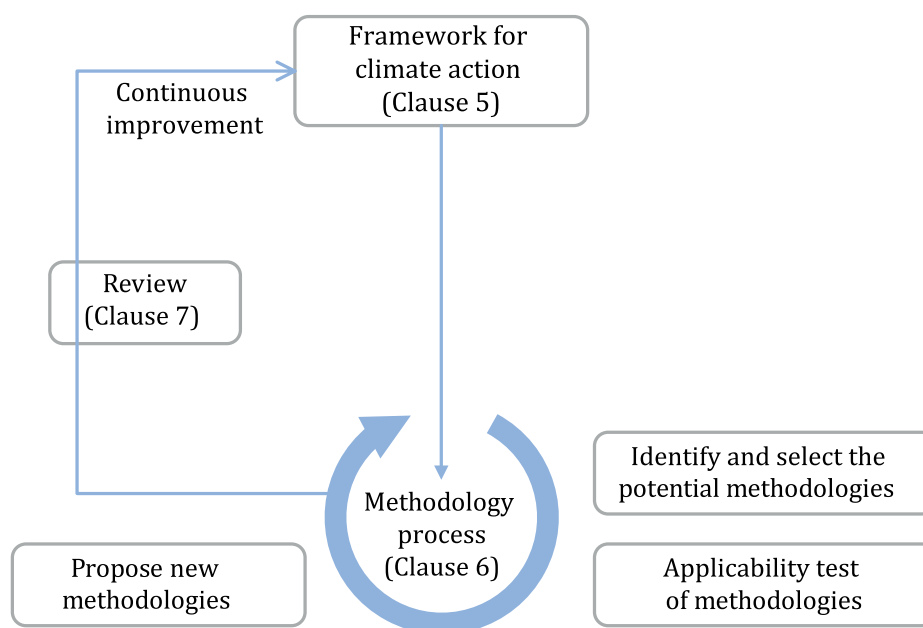

Figure 1 — This document in the context of a framework and methodologies

This document facilitates the harmonization of existing International Standards (e.g. ISO 14001, ISO 50001, ISO 14064-1 and ISO 14064-2) as well as future International Standards (e.g. related to climate adaptation) to be used to support climate action.

It also provides guidance on how to review the framework and on appropriate communication. This should reduce the risk of inconsistencies in the reporting of aggregated climate actions, by connecting various climate actions with various methodologies and communication responses and reports for disclosing climate actions, thereby saving time and resources.

Greenhouse gas management and related activities — Framework and principles for methodologies on climate actions

1 Scope

This document gives guidelines by means of a framework and principles for establishing approaches and processes to:

- identify, assess and revise methodologies;
- develop methodologies;
- manage methodologies.

This document is applicable to climate actions to address climate change, including adaptation to its impacts and greenhouse gas (GHG) mitigation in support of sustainability. Such actions can be used by or for projects, organizations, jurisdictions, economic sectors, technologies and products, policies, programmes and non-government activities.

This document does not create guidance for a specific methodology.
